Release 0.0.0pre

Brian McFee

July 08, 2016

1 API	3
1.1 Core functionality	3
1.2 Feature extractors	3
1.3 Task transformers	3
2 Changes	5
2.1 Changes	5
3 Contribute	7
4 Indices and tables	9
Python Module Index	11

Pumpp is designed to make it easy to convert pairs of (*audio, jams*) into data that can be easily consumed by statistical algorithms. Some desired features:

- Converting tags to sparse encoding vectors
- Sampling (*start, end, label*) to frame-level annotations at a specific sampling rate
- Extracting first-level features (eg, Mel spectra or CQT) from audio
- Aligning and storing the results in a simple data structure (npz, hdf5)
- Converting between annotation spaces for a given task
- Helper variables for semi-supervised learning

1.1 Core functionality

1.2 Feature extractors

1.3 Task transformers

Changes

2.1 Changes

- Not yet released.
